### **RAPID LINK POWER™ IN-WALL POWER KIT by VANCO INTERNATIONAL**

**Batavia, IL. January 15, 2009** – Vanco International, a leading edge manufacturer of home theater and low voltage electronics for over 50 years is excited to introduce their latest addition to the Rapid Link family – Rapid Link Power™ In-Wall Power Complete Install Kit with Romex®.

This new kit includes everything you need to easily install a power outlet for a wall mounted HDTV Flat Screen Plasma or LCD TVs. The Rapid Link Kit includes Power Outlet Plate, Power In-Let Plate, In-Wall Electrical Mounting Boxes, 36” Power Cord, and 12-1/2 ft of Romex® NM-B 14/2 Wire (Be sure to check with your Local Building Jurisdiction for proper Romex installation requirements).

Unsightly cords can ruin the appearance and look of your wall mounted flat panel TV. With the Rapid Link Power™ Install Kit, you simply cut one opening and place one wall plate near your mounted TV and another adjacent to the nearest wall receptacle. You then run a length of Romex® between the two behind the wall. Next, plug your monitor in and use the provided power cord to extend the power from your existing wall outlet to the new wall outlet that you installed next to it. The result is a clean and professional installation, free of hanging wires.

The Rapid Link Power™ is easy and safe to install at the same time as running the A/V cables, ideal for those retrofit projects, and complies with the National Electric Code requirements. The dual power outlet provides more space and convenience for connecting a power cord.

While, the unique recessed power in-let wall plate eliminates the risk of electrical shock. It also offers a cost-effective way to protect expensive home theater equipment from surge damage when connected to a power surge/conditioner. Thus, Rapid Link Power™ In-Wall Power Kit with Romex gives you a complete, safe in-wall power installation solution.
